

### FEATURES

- Dual-Supply Operation . . . ±5 V to ±18 V
- Low Noise Voltage . . . 4.5 nV/√Hz
- Low Input Offset Voltage . . . 0.15 mV
- Low Total Harmonic Distortion . . . 0.002%
- High Slew Rate ... 7 V/µs
- High-Gain Bandwidth Product . . . 16 MHz
- High Open-Loop AC Gain . . . 800 at 20 kHz
- Large Output-Voltage Swing . . . 14.1 V to -14.6 V
- Excellent Gain and Phase Margins

# **DESCRIPTION/ORDERING INFORMATION**

The MC33078 is a bipolar dual operational amplifier with high-performance specifications for use in quality audio and data-signal applications. This device operates over a wide range of single- and dual-supply voltages and offers low noise, high-gain bandwidth, and high slew rate. Additional features include low total harmonic distortion, excellent phase and gain margins, large output voltage swing with no deadband crossover distortion, and symmetrical sink/source performance.

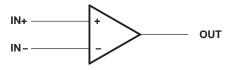

#### **ORDERING INFORMATION**

T <sub>A</sub>	PACKAGE	(1)	ORDERABLE PART NUMBER	TOP-SIDE MARKING <sup>(2)</sup>		
	PDIP – P	Tube of 50	MC33078P	MC33078P		
	SOIC – D	Tube of 75	MC33078D	1422070		
–40°C to 85°C		Reel of 2500	MC33078DR	– M33078		
		Reel of 2500	MC33078DGKR	MN		
	VSSOP/MSOP – DGK	Reel of 250	MC33078DGKT	MY_		

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at www.ti.com/sc/package.

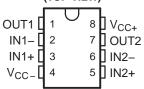

(2) DGK: The actual top-side marking has one additional character that designates the assembly/test site.

### SYMBOL (EACH AMPLIFIER)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

# MC33078 DUAL HIGH-SPEED LOW-NOISE OPERATIONAL AMPLIFIER

SLLS633C-OCTOBER 2004-REVISED NOVEMBER 2006

#### Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

			MIN	IAX	UNIT
V <sub>CC+</sub>	Supply voltage <sup>(2)</sup>			18	V
V <sub>CC</sub>	Supply voltage <sup>(2)</sup>			-18	V
$V_{CC+} - V_{CC-}$	Supply voltage			36	V
	Input voltage, either input <sup>(2)(3)</sup>		V <sub>CC+</sub> or V	′cc–	V
	Input current <sup>(4)</sup>			±10	mA
	Duration of output short circuit <sup>(5)</sup>		Unlim	ited	
		D package		97	
$\theta_{JA}$	Package thermal impedance, junction to free $air^{(6)(7)}$	DGK package		172	°C/W
		P package		85	
TJ	Operating virtual junction temperature			150	°C
T <sub>stg</sub>	Storage temperature range		-65	150	°C

Stresses beyond those listed under Absolute Maximum Ratings may cause permanent damage to the device. These are stress ratings (1) only, and functional operation of the device at these or any other conditions beyond those indicated under Recommended Operating Conditions is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.

All voltage values, except differential voltages, are with respect to the midpoint between  $V_{CC+}$  and  $V_{CC-}$ . The magnitude of the input voltage must never exceed the magnitude of the supply voltage. (2)

(3)

Excessive input current will flow if a differential input voltage in excess of approximately 0.6 V is applied between the inputs, unless (4) some limiting resistance is used.

The output may be shorted to ground or either power supply. Temperature and/or supply voltages must be limited to ensure the (5) maximum dissipation rating is not exceeded.

Maximum power dissipation is a function of  $T_{I}(max)$ ,  $\theta_{IA}$ , and  $T_{A}$ . The maximum allowable power dissipation at any allowable ambient (6) temperature is  $P_D = (T_J(max) - T_A)/\theta_{JA}$ . Operating a the absolute maximum  $T_J$  of 150°C can affect reliability. The package thermal impedance is calculated in accordance with JESD 51-7.

(7)

### **Recommended Operating Conditions**

		MIN	MAX	UNIT
V <sub>CC</sub> -	Supply voltage	-5	-18	V

### **APPLICATION INFORMATION**

#### **Output Characteristics**

All operating characteristics are specified with 100-pF load capacitance. The MC33078 can drive higher capacitance loads. However, as the load capacitance increases, the resulting response pole occurs at lower frequencies, causing ringing, peaking, or oscillation. The value of the load capacitance at which oscillation occurs varies from lot to lot. If an application appears to be sensitive to oscillation due to load capacitance, adding a small resistance in series with the load should alleviate the problem (see Figure 2).

<sup>(1)</sup> The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW**: Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

<sup>(2)</sup> RoHS: TI defines "RoHS" to mean semiconductor products that are compliant with the current EU RoHS requirements for all 10 RoHS substances, including the requirement that RoHS substance do not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, "RoHS" products are suitable for use in specified lead-free processes. TI may reference these types of products as "Pb-Free".

RoHS Exempt: TI defines "RoHS Exempt" to mean products that contain lead but are compliant with EU RoHS pursuant to a specific EU RoHS exemption.

**Green:** TI defines "Green" to mean the content of Chlorine (CI) and Bromine (Br) based flame retardants meet JS709B low halogen requirements of <=1000ppm threshold. Antimony trioxide based flame retardants must also meet the <=1000ppm threshold requirement.

<sup>(3)</sup> MSL, Peak Temp. - The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

<sup>(4)</sup> There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.
